
(a) Hat: $S(\mathbf{k})$, circles: lattice of Λ^* (0°)
(b) Spectre: $S(\mathbf{k})$, off any such lattice
(c) Turtle: $S(\mathbf{k})$, circles: lattice of Λ^* (30°)
k_x
k_y
(d) azimuthal mean; dotted: $|b|\{1, \sqrt{3}, 2, \sqrt{7}, 3\}$ of the Hat
Hat
Spectre
Turtle
triangular
$\langle S \rangle$ over the circle
$|k|$ (unit density)
(e) small k: $S \lesssim 0.02$ at $k \approx 0.4$--1 (grey: window leakage)
Hat: floor 0.005 at $k = 0.43$
Spectre: floor 0.004 at $k = 0.58$
Turtle: floor 0.017 at $k = 0.43$
triangular (window leakage)
Poisson, $S = 1$
$\langle S \rangle$
$|k|$
(f) the energy gap, split in reciprocal space
Hat: total
Spectre: total
Hat: $|k| < 2.9$
Spectre: $|k| < 2.9$
Hat: $|k| \geq 2.9$
Spectre: $|k| \geq 2.9$
gap above A_2 from $S(\mathbf{k})$
kernel width α
